SUMMARY

Backend engineer with ~3 years of experience building distributed systems and payments infrastructure, currently powering financial systems processing INR 1B+ monthly at [Spinny](#). Strong focus on system design, database architecture, and reliability. Contributed to Django with experience working on ORM internals. Seeking opportunities with international teams.

TECHNICAL SKILLS

Backend	Python (Django, FastAPI), Go, Node.js, GraphQL, REST API Design
Data & Streaming	Apache Kafka, Celery, Redis, Apache NiFi, AWS SQS/DMS
Databases	PostgreSQL (Read/Write Replica Architecture), MongoDB, SQLAlchemy
Infrastructure	Docker, AWS, Google Cloud, CI/CD, Grafana Monitoring, Git

EXPERIENCE

Spinny

Software Development Engineer --- Payments, Demand

Gurugram, India
May 2023 -- Present

- Led development of a multi-bank **payment gateway**, reducing drop-offs by **31%**, increasing online payments by **12%**, and saving **1%** in transaction fees.
- Architected an internal **payments SaaS platform** unifying multiple gateway integrations, reducing onboarding time by **90%** and standardizing flows across teams.
- Designed and implemented **database routing architecture** to isolate payments from the monolith, offloading **20%** production traffic and eliminating **replication lag**.
- Extended Django **ORM internals** to support cross-database queries with **read/write separation**, enabling scalable multi-database architecture.
- Took independent initiative to **design and deploy** an internal version of **CodeCoverage (AI test generation tool)**, integrating with **Jira**, **PR workflows**, and **CI/CD pipelines** to automate test creation and enforce coverage in development workflows.
- Optimized **Celery workers** using long polling and concurrency control, reducing **AWS SQS API calls by 50%**.
- Architected a configurable **audit framework** with logging, middleware, and database hooks for cross-service observability and compliance.
- Built a high-throughput **IVR dispatch system** in **Node.js**, handling **200k+ calls/day** and designing resilient callback pipelines for large-scale outbound operations.

Spinny

Technical Consultant (Internship)

Remote
Oct 2022 -- Mar 2023

- Architected and built an internal **CRM system** with role-based access control and audit logging, using **Kafka**, **Celery**, **AWS**, and **Docker**.
- Built an **event-driven pipeline** on **Google Cloud** to automate onboarding/offboarding (access revocation, backups), clearing a **10k+ task backlog**.

Examarly

Software Development Engineer (Internship)

Remote
Dec 2021 -- Jun 2022

- Built backend systems from scratch using **FastAPI** and **SQLAlchemy**, scaling to **100k+ users**.
- Implemented **Pytest-based testing infrastructure**, enabling reliable CI/CD and high test coverage.

PROJECTS

- Django Contribution:** Contributed to Django by fixing cross-database behavior in `RelatedManager.add()` (Ticket #35974), identified during production scaling of distributed systems.
- CodeCoverage CLI:** Built an **AI-powered developer tool** using **RAG-based flow tracing** and **LangGraph agents** to automatically generate tests for legacy codebases. Implemented a **production-grade variant at Spinny** with Jira integration, business logic validation, PR review workflows, and CI/CD enforcement.
- State Machine Framework:** Designed and open-sourced a reusable **state-machine framework** for complex workflows, with an enterprise implementation using **Kafka** and **NiFi** for transaction processing.

AWARDS

- Won "**Driven by Customer**" award at Spinny for impact delivered by the payments team.
- 3x MLH Global Hackathon Winner** — built a [gamified sports platform](#) (Django), a [Javascript browser extension](#) for implementing child lock and a [crop suitability algorithm](#) using geo-tagging and spatial queries.

EDUCATION

Indian Institute of Information Technology, Una [📍](#)
B.Tech. Computer Science (7.2 CGPA)

Una, H.P., India
2019 -- 2023
